To whom it may concern.

Based on a rigorous Technology Assessment process where all aspect related to cost, schedule, HSE strategies, targets and plans have been identified, it is concluded that use of PYPLOK® press couplings is qualified technology for first use in Statoil. No further technology Qualification Program (TQP) will be required.

Due to limited experience with the use of PYPLOK® press couplings on high pressure and hydro carbon systems, Statoil has chosen a more restrictive area of use than the temperature, pressure and dimension limits specified in the certificates. It is chosen to limit the dimension up to 2" size and max #300 pressure class system on critical systems and #900 pressure class system on non-critical systems.

PYPLOK® will be listed in Statoil TR3016 during the next revision and this email is to certify the product until the TR3016 is updated.
